P07 Mobile Web: Style and Layout

1
Use CSS media queries to detect portrait or landscape mode.

2
Use CSS Flexbox to create a simple page layout consisting of a header, a footer, and a content area with a form.

- Add some input fields with labels to the form.
- Use CSS media queries to decide whether the labels are placed above or in front of the input fields.
- Try different values for the type attribute of the input fields.

Project

3
Create a first layout prototype for the Web version of your project.
